spaarke

SPAARKE OVERVIEW

Legal runs on decisions. Spaarke makes them intelligent.

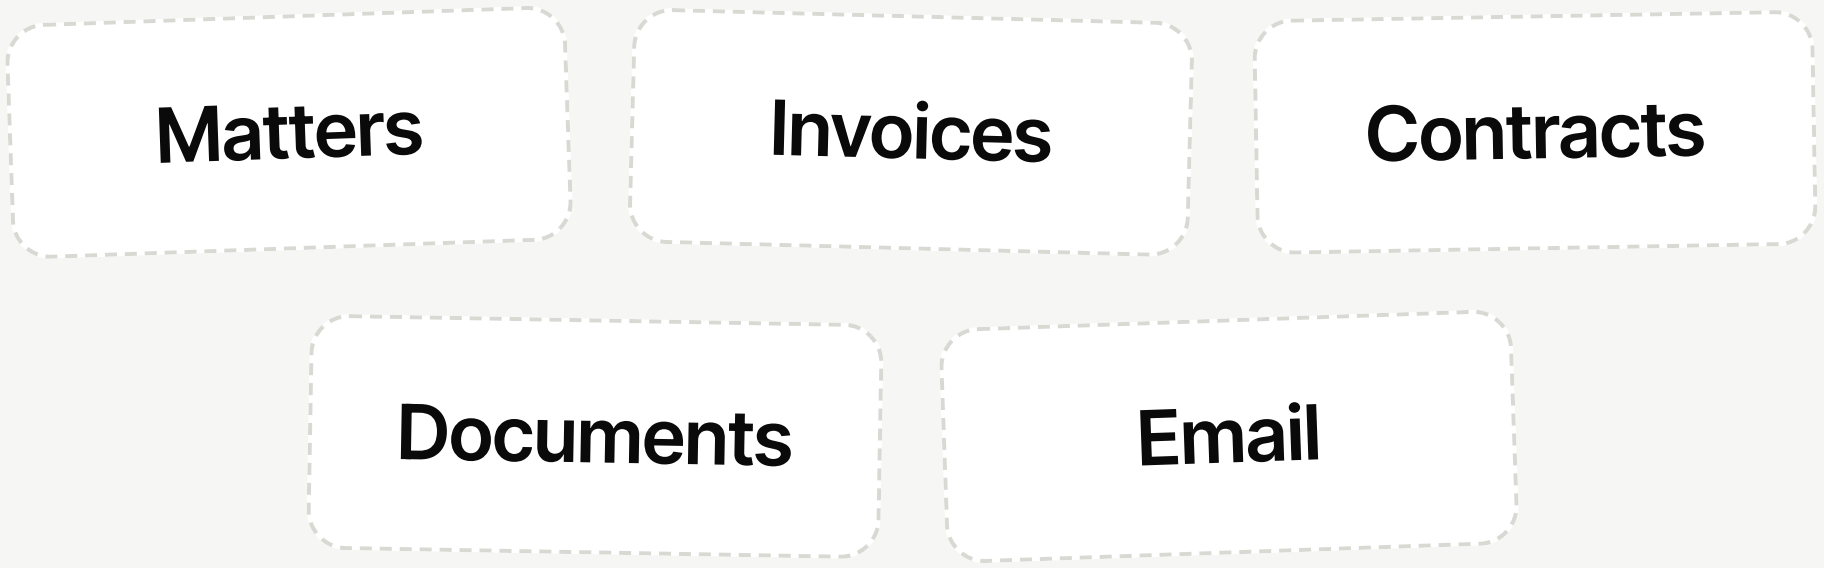

Spaarke brings your data, rules, and people into one model, so AI proposes with the full picture and your team makes the call.

THE PROBLEM

Your legal team makes thousands of decisions. What does it learn from them?

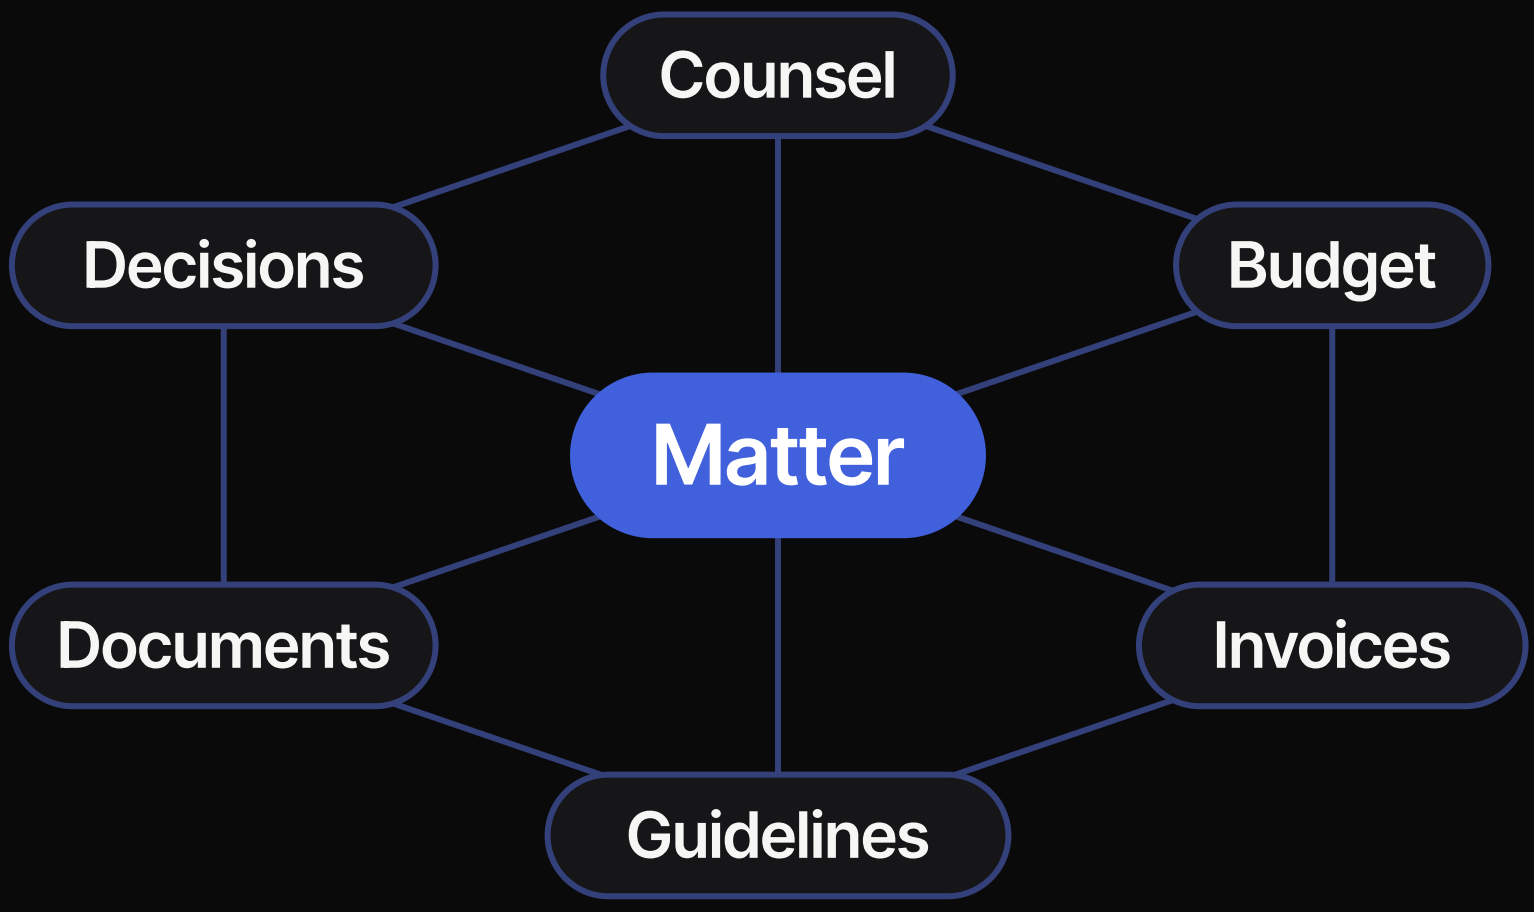

The evidence sits in matters, invoices, contracts, documents, and email, in systems never designed to be read together. The reasoning behind each decision is rarely kept, so the next one starts from scratch.

THE INTELLIGENCE LAYER

Spaarke joins them in one living model

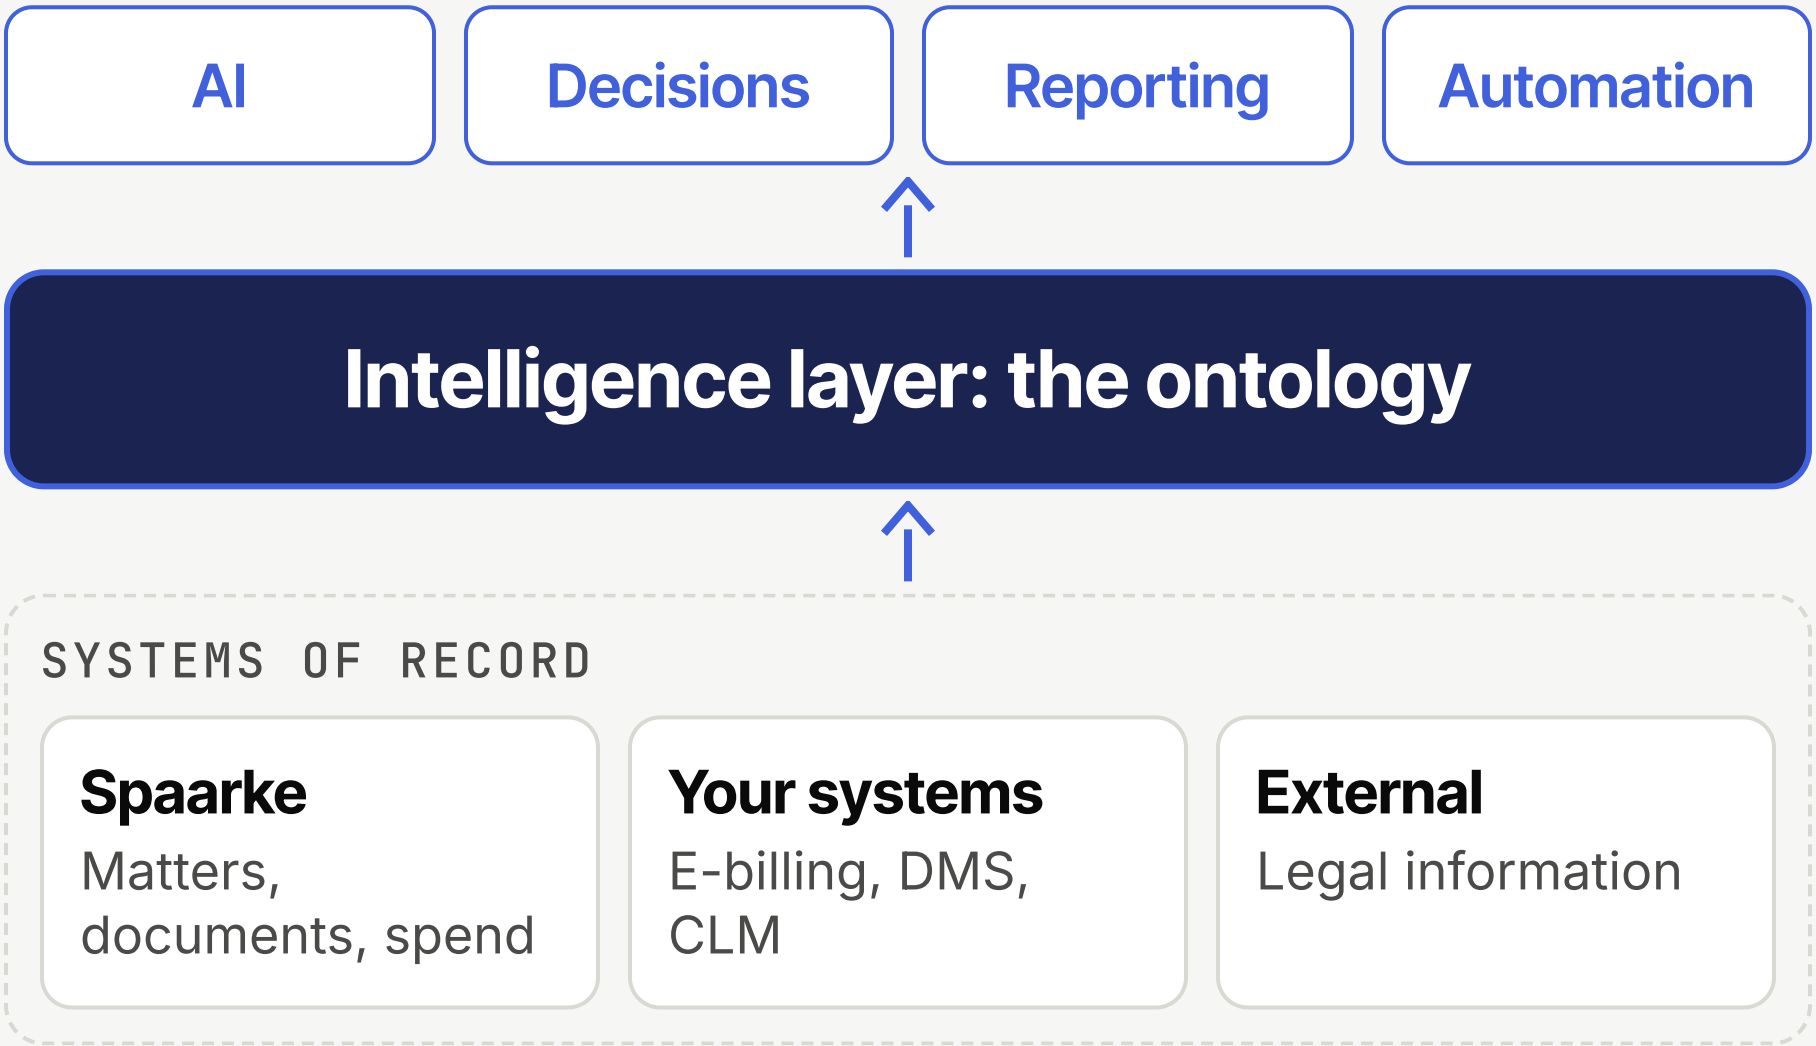

Built on top of your systems of record, the ontology records what exists, how each thing connects, and what can be done. A matter carries its counsel, budget, invoices, guidelines, and decisions together.

ONE ARCHITECTURE

One intelligence layer across your systems of record

Spaarke brings matters, documents, and spend together in its own system of record and works alongside the systems you keep. The ontology above them is the layer that AI, reporting, and automation draw on.

USE CASE: INVOICE REVIEW

From billing guideline to recorded decision

Guidelines become rules that cite their clause. Every invoice line is checked against the rules in force, and each decision is recorded with its rule and evidence.

1 **Guidelines become rules**
Each rule cites its clause

2 **Invoices arrive**
Portal upload as PDF or LEDES

3 **Every line is checked**
Line 14 bills $950 an hour against an $850 rate (section 3.2), on a matter at 92% of budget

4 **A person decides**
The rationale is recorded with the rule and evidence

SPAARKE AI

AI-directed, human-controlled

AI drafts rules, reads each invoice, and suggests the adjustment. A person confirms it, and each decision becomes knowledge for the next.

AI proposes

Drafts rules from your guidelines

Reads each invoice

Suggests the adjustment

A person decides

Publishes the rules

Confirms or changes

Approves the invoice

Decision record

The rule, the evidence, who decided, and why

Institutional knowledge

Each decision informs the next

WHERE YOU WORK

Built for where your team already works

Spaarke runs inside Copilot, Outlook, Word, Teams, and SharePoint, so your team keeps the tools it already knows.

Copilot

Answers grounded in your matters, documents, and decisions

Outlook

Email filed to the matter

Word and Excel

Documents saved to the matter

Teams

Matters worked with your team

SharePoint

Documents secured by matter

DEPLOY IT

In your own tenant | **Hosted by Spaarke**

THE SPAARKE METHOD

Five phases, and the model grows each cycle

Each decision moves through five phases, led by forward-deployed legal engineers working with your practitioners and end users. Start with one high-value decision, measure the result, and expand from there.

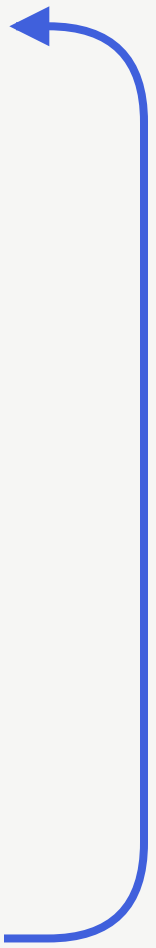

01 Envision
Choose the decision and set a baseline

02 Design
Model it in the ontology

03 Build
Test it on your own data

04 Deploy
AI proposes, and a person confirms

05 Manage
Run it, measure it, begin the next

SPAARKE AT A GLANCE

Start with one decision. Build intelligence with every decision after.

Technology, consulting, and managed services work together as one integrated platform and service. Forward-deployed legal engineers work inside your team, deliver a quick start, and run and grow the platform with you.

ONE INTEGRATED PLATFORM AND SERVICE

Technology	Consulting	Managed services
Platform, ontology, and Spaarke AI	Forward-deployed legal engineers	Technical, AI, and legal ops support

Joined by the ontology you own

Which decision would you start with?
